Odense-Denmark

PROFILE

Full-Stack developer with 2+ experience in client-side applications. My experience in client-side development led me to learn backend technologies such as node, express, mongoDB, SQL. I build backend application using state of the art technologies with security in mind.

PROJECTS

Country App

React, Redux, React-Bootstrap, React Router, SaSS, Netlify

Application made in ReactJs for API fetching and dynamic rendering practice, for this project fetching data from an external api has been implemented using Fetch ApI.

E-store project

Reactjs, Redux, React-Router, Sass, Stripe, Express, MongoDB, NodeJs

E-store project created for learning and developing skills purposes. The app is developed using all the tech stack that an e-commerce app would require to function properly at scale.

User Management

EJS, Express, MongoDB, NodeJs, MVC, NodeMailer

User Management project created for learning and developing skills purposes. The app is developed using all the tech stack with user management and admin. Mainly focused on backend skills.
